**TOYO AND KOCH-GLITSCH PARTNER TO OFFER
REVOLUTIONARY ENERGY SAVING SUPERHIDIC® SYSTEM**

WICHITA, Kan. – TOYO and Koch-Glitsch announced today a new partnership to distribute TOYO's innovative energy-saving distillation system, SUPERHIDIC®, to new global markets in Europe and the Middle East.

SUPERHIDIC® provides superior energy savings compared to conventional distillation systems in various industrial applications. With its enhanced Heat Integrated Distillation Column, SUPERHIDIC® has been recognized as the ultimate energy-saving distillation system.

TOYO's SUPERHIDIC® was selected in 2014 to enhance energy conservation and reduce greenhouse gas emissions at Maruzen Petrochemical Co. Ltd. in Japan. The world's first commercial plant with SUPERHIDIC® technology started operating in Japan last year, with actual energy conservation above 50 percent.

TOYO's engineering, design knowledge and innovative technology combined with Koch's market expertise, industrial knowledge and distillation technology will create sustainable value for customers in Europe and the Middle East. This partnership brings value to customers in refinery and petrochemical fields that are interested in maximizing energy savings and output.

TOYO's decision to partner with Koch-Glitsch to make SUPERHIDIC® available to customers is a result of the companies' collaboration on multiple successful distillation projects. The high-energy savings realized with SUPERHIDIC® technology are normally not achievable with similar technologies available on the market, making the capital investment justifiable, even with today's low energy cost. Both companies are committed to helping plant operators improve operational costs in an efficient way and maintain the sustainability of natural resources.

For more information on the partnership and on how to implement the SUPERHIDIC® system in your facilities, please visit <http://www.koch-glitsch.com/process/pages/superhidic.aspx> or <http://www.toyo-eng.com/jp/en/products/environment/superhidic/>.

###

About Toyo Engineering Corporation

Toyo Engineering Corporation is a leading engineering company that constructs the plant in a global stage centering on the plant engineering field. TOYO's operational area covers hydrocarbon fields such as oil & gas development, oil refining, petrochemicals, chemicals as well as non-hydrocarbon fields such as power generation and infrastructures, industrial plant such as pharmaceutical and fine chemicals. TOYO is now executing projects together with its group companies in various countries and regions. TOYO works with clients and partners to deliver value creation while contributing to sustainable development through innovation. TOYO was founded on May 1, 1961 and is headquartered in Narashino, Japan. More information is available at <http://www.toyo-eng.com>.

About Koch-Glitsch

Koch-Glitsch is a global leader in the design and manufacture of mass transfer, mist elimination, and liquid-liquid coalescing equipment for the refining, chemical, petrochemical and gas processing industries. With the largest installed base in the industry, Koch-Glitsch engineers have the knowledge and experience to supply innovative designs for an extensive range of applications and requirements. The company's products and services are available worldwide through its network of sales, engineering, manufacturing and service facilities. Koch-Glitsch, headquartered in Wichita, Kansas, is a Koch Chemical Technology Group, LLC company. More information is available at www.koch-glitsch.com.

SUPERHIDIC® is a trademark of Toyo Engineering Corporation registered in Japan.
